

## **About the Test - Toxicology Testing**

### **About Toxicology Testing**

The toxicology laboratory utilizes liquid chromatography tandem mass spectrometry to detect the concentrations of various medications, metabolites, and other substances in a urine specimen. Toxicology results confirm compliance, and reveal inconsistencies, within a patient's medication regimen.

Qitek Labs specifically offers results including historical, prescribed and consistent, prescribed and inconsistent, not prescribed and inconsistent, presumptive, and confirmation test results. The laboratory offers the analysis of alcohol, antidepressants, antipsychotic, barbiturates, benzodiazepines, illicit, opiates, opioids, muscle relaxers, opioids antagonist, stimulants, weight loss, and anticonvulsants drug classes.
